

Measures for Non-Residential New Construction Program			
Item	Measure Name	Measure Description	Incentive*
1	Optimal Choice of Vertical Fenestration	• Select east and west windows with a solar heat gain coefficient (SHGC) of 0.35 or lower.	<p><b>Customer</b> Eligible for Incentives up to \$0.10 per kWh Savings for All Measures</p> <p><b>Design Team</b> Eligible for Incentives up to \$0.02 per kWh Savings for All Measures</p>
2	High Efficiency and Variable Speed Air-Cooled Chillers	• Select a variable speed air-cooled chiller to serve building cooling loads.	
3	High Efficiency DX Cooling Equipment	• Select efficient refrigerant-based cooling equipment with full load or seasonal performance that exceeds code requirements.	
4	High Efficiency and Variable Speed Packaged DX Cooling Equipment	• Select packaged variable-volume single-zone or multi-zone air-handler to serve building spaces.	
5	High Efficiency Packaged Air-Source Heat Pumps	• Select air-source heat pump equipment with full load or seasonal performance that exceeds code requirements.	
6	Demand Controlled Ventilation/CO2 Controls	• Implement demand ventilation controls that reduce fresh air volume during periods of light occupancy.	
7	Variable-Air-Volume (VAV) Dual-Max Controls (electric heat)	• Implement "Dual-Max" VAV terminal box controls in a VAV system with electric re-heat coils.	
8	Variable-Air-Volume (VAV) Supply Air Temperature Reset (electric heat)	• Implement VAV system supply air temperature reset controls that exceed code requirements in a VAV system with electric re-heat coils.	
9	High Performance Interior Lighting	• Install a lighting design that exceeds code requirements for connected power and control.	
10	LED Exterior Lighting	• Install an exterior lighting design with connected power that exceeds code requirements.	
11	Supervisory Plug Load Management Systems	• Implement proximity or activity controls to automatically shut off plug loads.	
12	Chiller Controls	• Implement chilled water pump controls or chiller floating head pressure controls that exceed code.	
Program Requirements			
<ul style="list-style-type: none"> <li>• Project must involve a brand-new construction, addition, or total building remodel.</li> <li>• Must be accepted into program before or during the project design phase.</li> <li>• Energy savings are calculated relative to state energy code requirements. Equipment and system efficiencies must exceed baseline requirements.</li> <li>• Equipment not eligible for rebate in the Non-Residential New Construction program may be eligible for rebate in other energy efficiency programs offered by Dominion Energy for non-residential customers.</li> </ul>			

\*For more information, please call 1-888-366-8280. This program is available until fully subscribed. Rebate payments will be capped at a maximum limit of 75% of Customer's total invoice amount based on the eligible incentives on Customer's rebate application. Rebate amounts are subject to modifications without notice.
